

Frontend Mobile App Developer (React Native) – 4+ Years Experience

Location: HSR Layout, Bangalore (On-site)

Compensation: Competitive Salary + ESOPs

Stage: Early Team Member, Core Product Builder

About Aforro

Aforro is building the backbone infrastructure that will empower thousands of kirana stores to play in a whole new game — matching the speed, efficiency, and intelligence of quick-commerce giants without the burn. This is a ground-up tech build, and we're looking for someone who can think beyond tickets and tasks, and truly own systems end-to-end.

What You Will Do

- Build high-performance mobile apps from scratch using React Native for Android and iOS.
- Take complete ownership of the app product lifecycle: development, testing, deployment, and iteration.
- Implement complex workflows across both the user shopping app and rider app, including order management, payments, delivery tracking, and related operations.
- Collaborate closely with Figma designers to translate their designs into pixel-perfect, responsive, and intuitive mobile interfaces.
- Optimize apps for performance, offline support, and high concurrency.
- Integrate with backend services and APIs, ensuring smooth data flow and reliability.
- Mentor and guide mobile interns to deliver scalable, maintainable code.
- Troubleshoot, debug, and continuously improve the app based on feedback and analytics.

You Should Have

- 4+ years of hands-on mobile app development experience using React Native.
- Proven experience building apps from scratch — not just maintaining existing code.
- Strong skills in state management, navigation, background tasks, push notifications, and API integration.
- Experience collaborating with designers to implement UI/UX from Figma/Sketch files.
- Understanding of Android and iOS deployment pipelines, app store submissions, and platform guidelines.
- Experience with testing frameworks, CI/CD, and mobile performance monitoring.
- Ability to lead and mentor interns or junior developers.
- Ownership mentality: you take full responsibility for your app modules.
- Comfortable working in a fast-paced, early-stage startup environment.

Bonus Points

- Experience building **high-traffic apps for e-commerce, delivery, or logistics.**

- Experience with **analytics, crash reporting, and performance optimization**.
- Familiarity with advanced mobile architecture patterns.

Traits That Matter

- You own the product, not just the code.
- You thrive on complex systems and workflows.
- You solve problems proactively, and iterate fast.
- You are accountable, detail-oriented, and obsessed with quality.
- You want to build apps from scratch that define a company's product.

What We Offer

- Competitive salary + meaningful ESOPs.
- Chance to build a nation-scale platform from scratch.
- Work directly with founders who think in systems and scale.
- High ownership, zero bureaucracy.
- A fast-paced environment where you grow much faster than in a conventional role.
